ORCID iD  0000-0001-5869-7611
phone +41 22 37 96314

2. Current position

09/2024 – today SNSF Ambizione fellow
Département de Physique Théorique, Université de Genève
Principle investigator of SNSF project no. 215997: *Gravitational waves from cosmological phase transitions: Precision cosmology in the light of LISA* (PRECLISA)

3. Employment history

09/2022 – 08/2024 Postdoctoral researcher
Institute for Theoretical Physics, Goethe University Frankfurt
Advisors: L. Sagunski, J. Schaffner-Bielich
05/2020 – 08/2022 Postdoctoral researcher
Helsinki Institute of Physics, University of Helsinki
Advisors: A. Vuorinen, K. Rummukainen
02/2017 – 04/2020 Doctor of Philosophy, PhD Physics (magna cum laude), 23/04/2020
AEC, Institute for Theoretical Physics, University of Bern
Advisor: M. Laine
Thesis: *Multi-loop investigations of strong interactions at high temperatures*, (cf. research output [4]).

- 10/2016 – 01/2017 Technical student
CERN, Accelerator and Beam Transfer, Beam Transfer Physics
Theoretical optimisation of slow extraction (cf. research output [6]).
Advisors: M.A. Fraser, M. Meddahi
- 06/2015 – 08/2015 Summer student
CERN, ABT, BTP
Thesis: *Optimising simulation times of SPS slow extraction using MAD-X*, (cf. research output [5]).
- 07/2014 – 08/2014 Summer student (GPA 1.0/1.0)
HEPHY, Institute of High Energy Physics, Vienna
Advisor: R. Schöfbeck
Thesis: *Increasing the sensitivity of a search for supersymmetry in the single lepton channel with the Transverse Mass M_{T2} (CMS)*, (cf. research output [1]).

4. Education

- 07/2017 Ècole de physique des Houches
Effective Field Theory (EFT) in particle physics and cosmology
- 03/2017 Computer algebra and particle physics (CAPP) school, DESY, Hamburg
- 09/2014 – 11/2016 Master of Science, MSc Physics (GPA 5.5/6.0), 01/11/2016
ETH Zürich, Switzerland
Major: Theoretical high energy physics, lattice QCD, applied mathematics
Advisor: P. de Forcrand
Thesis: *Inhomogeneous condensation in quark-based QCD effective models via wavelet pseudoparticles*, (cf. research output [3]).
- 07/2014 LAPP Annecy-le-Vieux, France
Summer School in Particle and Astroparticle physics
- 08/2013 Theoretical Physics Summer school, University of Utrecht, Netherlands
- 09/2011 – 08/2014 Bachelor of Science, BSc Physics (with distinction, GPA 1.1/1.0), 12/08/2014
Graz University of Technology, Austria
Advisors: H. G. Evertz, C. B. Lang
Thesis: *π - and ρ -Meson mass spectroscopy from Lattice QCD*, (cf. research output [2]).
- 09/2002 – 05/2010 Österreichische Reifeprüfung, Matura (with distinction, GPA 1.0/1.0)
AHS BG/BRG Leibnitz, Austria
Major: Physics and geometry
Advisor: H. Scherz

Thesis: *Sonoluminescence – A bubble’s enlightenment*. A theoretical and experimental approach to the effect of Sonoluminescence.

5. Teaching activities

2023 – Lectures

Institute for Theoretical Physics, Goethe University Frankfurt
Theoretische Physik 1: Mathematische Ergänzungen 15wk×2hr

03/2022 *Phase transitions in the early universe* (exercises) 1wk×5hr
 Galileo Galilei Institute for Theoretical Physics
 Theoretical Aspects of Astroparticle Physics, Cosmology and Gravitation

2024 – PhD thesis supervisor,
 Département de Physique Théorique, Université de Genève
 F. Bernardo, 09/2024 –

2020 – PhD thesis mentor,
 Institute for Theoretical Physics, Goethe University Frankfurt
 R. Diedrichs, 10/2022 – , supervised by L. Sagunski
 D. Schmitt, 10/2022 – , supervised by L. Sagunski
 Helsinki Institute of Physics, University of Helsinki
 J. Österman, 09/2020 – , supervised by A. Vuorinen

2021 – MSc thesis supervisor,
 Institute for Theoretical Physics, Goethe University Frankfurt
 T. Caldas, 02/2024 – , co-advised with L. Sagunski (supervisor), D. Schmitt
 Helsinki Institute of Physics, University of Helsinki
 S. Vihko, 06/2021 – 03/2022, co-supervised with A. Vuorinen
 Thesis: *EFT methods and calculational techniques in imaginary time formalism of thermal QCD*.

2022 – BSc thesis supervisor,
 Institute for Theoretical Physics, Goethe University Frankfurt
 R. Baumann, 10/2022 – 09/2023, co-supervised with L. Sagunski, D. Schmitt
 Thesis: *Gravitational waves in the Abelian Higgs model*

2013 – Teaching assistant

Institute for Theoretical Physics, Goethe University Frankfurt
Astrophysics II

AEC, Institute for Theoretical Physics, University of Bern

8832-FS2017-0	<i>Standard Model</i>
416542-HS2017-0	<i>Quantum mechanics I</i>
628-FS2018-0	<i>Quantum mechanics II</i>
7638-HS2018-0	<i>Exercises in theoretical physics</i>
430949-FS2019-0	<i>Specialist course: Introduction to BSM physics</i>
630-HS2019-0	<i>Statistical thermodynamics II</i>

ETH Zürich, D-MATH/D-PHYS

401-1652-10L	<i>Numerical analysis I</i>
401-0654-00L	<i>Numerical methods</i>
402-0063-00L	<i>Physics II</i>

Graz University of Technology, ITP/IEP

Theoretical mechanics, physics laboratory I/II

6. Event organisation

- 08/2024 Conference organiser, *Strong and Electro-Weak Matter 2024*, Goethe University Frankfurt
- 06/2024 Convener, *2nd Edition of the Workshop ‘Quarkonia meet Dark Matter’ (QMDM)*, Institute for Advanced Study, Technical University of Munich
- 01/2024 Conference organiser, *Mainz-Frankfurt-Münster CosmoCoffee*, Mainz

7. Outreach

- 09/2017 Public research display, University of Bern
Nacht der Forschung (NdF)

8. Research visits

- 06/2023 CERN, Genève
- 12/2022 Kavli IPMU, Tokyo; G. White
- 09/2022 Jožef Stefan Institute, Ljubljana; M. Nemevšek
- 06/2022 SUBATECH, Nantes; J. Ghiglieri
- 10/2021 University of Basel; S. Antusch
- 10/2021 University of Bern, AEC, Institute for Theoretical Physics; M. Laine
- 08/2019 University of Helsinki, Helsinki Institute of Physics; A. Vuorinen, K. Rummukainen
- 08/2018 Universidad del Bío-Bío, Grupo de Cosmología y Partículas Elementales; Y. Schröder

9. Professional services

03/2022– Referee

American Physical Society's journals: Phys. Rev. **D**, Phys. Rev. **L**

Springer's journals: JHEP, Eur. Phys. J. **C**

10. Scientific research skills

Theoretical (Dimensionally reduced) effective field theories, thermal field theory, quantum field theory, Lattice QCD, simulations in physics, computer algebra techniques, general relativity, cosmology, string theory, conformal field theory, group theory

Computational C/C++, Python, Matlab, FORM, ROOT, FORTRAN 77, Unix, Linux, Mathematica, LaTeX, computer hardware, HTML, Office, CAD-Software

11. Prizes, awards, fellowships

2024 – 2028 SNSF Ambizione Fellowship, Swiss National Science Foundation (SNSF)
CHF 810k research grant

2011 – 2014 Scholarship of excellence Graz University of Technology
EUR 2.4k scholarship

12. Languages

German Mother-tongue

English Proficient C2, TOEFL 106/120 (2014), Cambridge ESOL B2 First FCE (2010)

Spanish Intermediate B1

Danish Elementary A2

French Beginner A2

Latin Very good (literal translation)

13. Major scientific achievements

Precision thermodynamics for cosmological phase transitions.

Invigorated by the first gravitational wave (GW) detections from binary mergers, I dedicated a large part of my first postdoc pushing the accuracy of the thermodynamics of cosmological phase transitions. In my first post-doctoral project, I assessed the theoretical uncertainties for cosmological phase transitions in [12]. The motivation for such a theoretical leap in precision was that leading-order (LO) calculations of thermodynamics are insufficient and render the GW spectrum ambiguous. An innocuous uncertainty at early stages has far-reaching effects in the beyond the Standard Model (BSM) – GW pipeline and put successful stochastic gravitational wave background (SGWB) observations at LISA at risk before they even begin.

The work in [12] established the current state-of-the-art precision for GW predictions. This level of precision was achieved by using methods of dimensionally reduced EFT to derive the Standard Model EFT (SMEFT) three-dimensional effective potential and its minimisation.

Development of automated 3d EFT framework for thermal field theories.

To improve the overall understanding of such EFT computations, we put forward a didactic review on the robust approach to thermal resummation as a combination between perturbative and non-perturbative techniques [11]. By inspecting the (dynamical) real singlet extension to the Standard Model, I computed novel contributions to the parameters of the dimensionally reduced EFT at next-to-leading order (NLO) which will be applicable for future non-perturbative lattice studies of the model. While, we demonstrated that two-loop contributions in the matching and effective potential are substantial [26, 13] for robust predictions of the thermodynamic phase transition parameters, we also devised a minimal setup [17] that combines gauge invariance and resummation and supersedes a previous scheme.

In this context, I automated the evaluation and reduction of analytically challenging sum-integrals at non-zero temperature. The automation via the corresponding **Mathematica** package **DRalgo** [21], is now successfully applied not only in QCD but also in the **most accurate predictions of gravitational waves** from cosmological first-order phase transitions in generic BSM theories.

Gauge-invariant framework for nucleation at finite temperature.

Theoretical uncertainties when determining the finite-temperature nucleation rate of bubbles of the new stable vacuum are still substantial. Especially in the context of radiatively induced transitions, I resolved a long-standing problem related to the unphysical gauge-dependence of the bubble nucleation rate. By employing effective theories at the nucleation scale for the Abelian Higgs model, I demonstrated for the first time [18, 15] gauge invariance of the leading order (LO) perturbative contributions in radiatively induced transitions.

Research output list

If not specifically indicated otherwise, the following research list is in alphabetical order. In all subsequent research output, I contributed at the level of first or second author, conducted the computations, (co-)led the writing, and developed the main ideas of the project.
